War Department, Office of the Surgeon General,
Army Medical Museum and Library,
Washington, August 1, 1918.

Maj. Gen. William C. Gorgas,
Surgeon General, U. S. Army.

General: I have the honor to present herewith the first volume of the Third Series of the Index-Catalogue of the Library of this Office. This volume includes 3,137 author titles, representing 6,089 volumes and 1,702 pamphlets, and 29,602 titles of articles in periodicals. The Library contains a total of 230,559 volumes bound and unbound, of which 196,243 are bound; and 352,523 pamphlets, in all 583,082 items (volumes and pamphlets). Exclusive of transactions of societies, the number of current periodicals now on file in the Library is 748.

The following table shows the number of titles in the Index-Catalogue, as far as published:

	Author titles.			Subject titles.		Portraits.
	Titles.	Volumes.	Pamphlets.	Book titles.	Journal articles.	
Total in First Series	176,364	85,663	151,504	168,557	511,112	4,335
Total in Second Series	169,812	86,248	166,291	136,405	645,557	914
Third Series, Vol. I	3,137	6,089	1,702	4,537	29,602	141
Total to date	349,313	178,000	319,497	309,499	1,186,271	5,390

This volume is the beginning of a new series, which will, in all probability, be as extensive as either the first or the second, the total number of volumes to date being 38.

On account of the immense number of pamphlet reprints in the Library, which are, in effect, repetitions of articles already indexed in current periodicals, it has been decided to omit these pamphlet entries from the bibliographies of books and pamphlets given under the name of each author, for the reason that such reprints, when not representing a complete set of subject titles under an author's name, have never been given in the classical bibliographies of medicine and, under present conditions, would tend to make the amount of printing so extensive as to be impracticable. In order to save space in printing, a number of obvious contractions have also been employed in the subject bibliographies in small type, e. g., the omission of the titles of certain articles which are either trite or a mere repetition of the title of the whole bibliography.

In starting this Third Series, a few words about the prospects of the Library of the Surgeon General's Office and the status of current periodical literature, seem appropriate.

As stated in the letter of transmission prefacing volume twenty-one of the Second Series of the Index-Catalogue, a card catalogue of the entire collection of books and pamphlets, including all author titles in the First and Second Series, has been started and is kept in special file cabinets in the Library Hall. This card catalogue, which is especially designed for public service, is now completed as far as the letter "Q," and it is expected that the whole alphabet of titles will be in

the files by December, 1918. Through the removal of the Civil War pension records of the Adjutant General's Office from the large room underneath the Library Hall, it is believed that sufficient space will be secured for the expansion of the Library and the public use of material, not before accessible on account of the contracted space in which our books and pamphlets have had to be kept to date. This might also be insured by the possibility of a new building for the collections in the Army Medical Museum. If the latter alternative is not possible, the large room above mentioned may be utilized as an additional Library Hall, to contain all the periodicals, bound and unbound, and to be used as a reading room for the general medical public, entering the building on the same floor. The removal of these periodicals from the book stacks in the Hall on the second floor will give abundant additional space for the rearrangement and reclassification of the remaining books in these stacks and shelf room for new accessions for many years to come. Thus a better tactical arrangement of books for public service will be established on both floors.

The collection of public documents, especially those touching all phases of public hygiene, has been carefully overhauled and the separate items reclassified and rearranged. This valuable material is now readily accessible for public use. The collection of medical incunabula (fifteenth century books) has been carefully segregated from all parts of the book stacks, now numbers 240 volumes and is thus accessible to students of medical history. A special catalogue of the same has been printed (Annals of Medical History, N. Y., 1917–18, i, 301–315). Our unique collection of portraits of medical celebrities is in process of mounting and will be placed in special portfolios. Our valuable collection of medical autographs has been very materially increased by donations from Dr. A. Jacobi (New York), and will be ultimately mounted in portfolios. Our appropriation for purchasing medical literature has been doubled by Congress for the present fiscal year (1918–19). This places the Library in position to purchase a large amount of European medical literature which has been inaccessible to date, by reason of war conditions. The German medical literature has not been fully accessible since the beginning of 1915; only the French medical periodicals have been obtainable, on account of the limited edition of books and pamphlets published, and the risk of transmitting copies of these overseas; very little of the Slavic and Scandinavian medical literature has been obtainable since the end of 1914. The medical literature of France and England has fallen off very considerably in quantity and that of Belgium is practically extinct. During the present year, an attempt will be made to secure any recent European literature which is not now in the Library but is otherwise obtainable directly by purchase.

Champe C. McCulloch, Jr.,
Colonel, Medical Corps, U. S. A.,
Librarian, S. G. O.
